
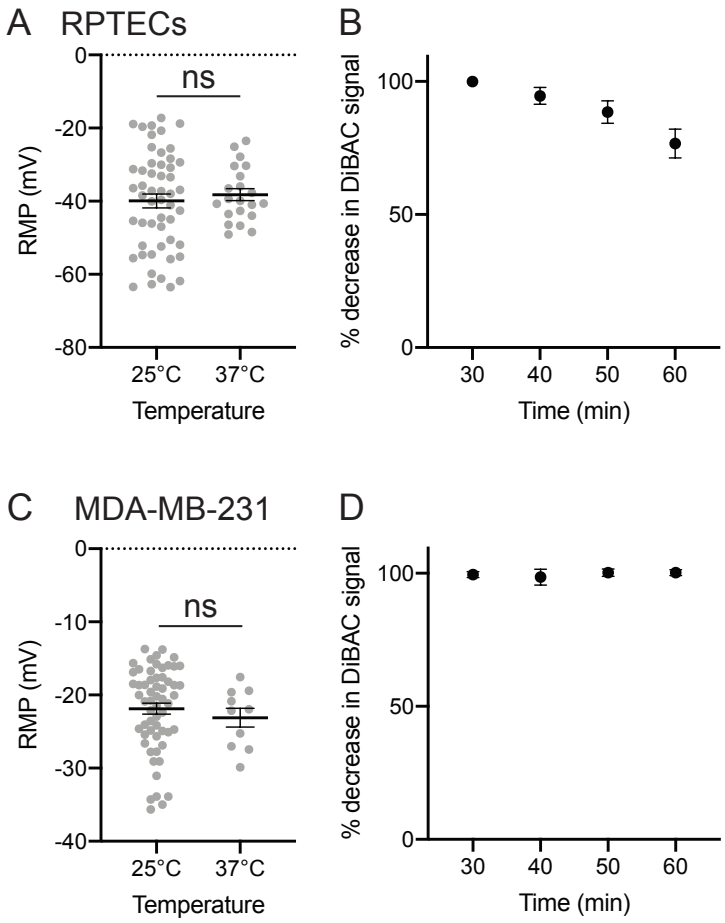

Figure S1: Stability of resting membrane potential and DiBAC signal. **(A)** RPTEC resting membrane potential (RMP) does not significantly vary at 25°C or 37°C when measured using patch clamp. **(B)** Change in DiBAC optical signal over 30 minutes of measurement (preceded by 30 minutes of incubation) in RPTECs. **(C)** MDA-MB-231 RMP does not significantly vary at 25°C or 37°C when measured using patch clamp. **(D)** Change in DiBAC optical signal over 30 minutes of measurement (preceded by 30 minutes of incubation) in MDA-MB-231s.
